LifeHospital domain model

Patient
- address *string*
- contact *string*
- document *integer*
- email *string*
- name *string*
- phone *string*

User
- address *string*
- contact *string*
- document *integer*
- email *string* *
- name *string*
- password_digest *string*
- phone *string*
- user_type *string*

Hospitalization
- location *text*
- medical_record_id *integer*
- procedures *text*
- treatments *text*

Inventory
- document *string*
- total_value *decimal*

InventoryMovement
- medicament_id *integer*
- movement_type *string*
- quantity *integer*
- total_value *decimal*
- unit_value *decimal*

Diet
- calories *float*
- description *text*

Prescription
- medicament_id *integer*
- quantity *integer*
- unit *string*

MedicalRecord
- description *text*
- historic *text*

SpecialCare
- desactivation *date*
- description *text*

Medicament
- description *text*
- dosage *decimal*
- inventory_min *integer*
- quantity *integer*

ClinicalOutcome
- description *text*
- observations *text*
- status *string*

Exam
- archive *text*
- description *text*
- observations *text*
- scheduled *boolean*

Procedure
- description *text*
- observations *text*
- scheduled *boolean*
